

MEDICAL MANAGEMENT PLAN OF CARE FOR TRAUMATIC BRAIN INJURY

Green River District School Health Program

Student: _____ Date of Birth: _____

Date: _____ School: _____

Physician(s) _____

Traumatic Brain Injury (TBI) is the most likely cause of death or permanent disability in children and adolescents. TBI is commonly divided into two major types of injuries: open and closed. TBI open means an opening has been created from the outside, through the skull. Closed head injury is the most common type of injury.

Common characteristics often shared by students with TBI include:

1. Can be impulsive, and more hyperactive.
2. Skills may return at different levels and rates
